Titan Intech Limited

Investor's Insights – June 2025 Edition

Dear Valued Shareholders and Investors,

We are pleased to welcome you to the 25th edition of *Investor Insights*, a monthly communication designed to keep our esteemed stakeholders informed about Titan Intech Limited's strategic milestones, market leadership, and innovation roadmap.

Transforming India's Display Landscape: The "titanview" Advantage

With great pride, we share the continued market success of our flagship product— "titanview" Interactive Flat Panel Displays (IFPDs). Since its introduction, "titanview" has not only received outstanding feedback from the market but has also firmly positioned Titan Intech as a technology frontrunner in India's fast-growing interactive display segment.

Equipped with a robust Android OS, intelligent multi-touch technology, and seamless content integration, "titanview" has emerged as the go-to solution for educational institutions, corporate environments, and training ecosystems. This has translated into a surge in order volumes—particularly through bulk deployments in CBSE schools, professional institutes, and enterprise clients—boosting top-line growth and enhancing long-term revenue visibility.

Education and Corporate Digitization: Dual Engines of Growth

"titanview" is significantly enhancing the quality of classroom delivery and student engagement, especially in Tier 2/3 towns and under-resourced regions. The vivid 4K displays, multilingual content capability, and AI-powered interactivity are replacing outdated technologies like projectors and blackboards. The all-in-one design eliminates the need for separate speakers, laptops, or microphones—making it a cost-effective and future-ready solution.

In the corporate segment, "titanview" is becoming integral to digital boardrooms and hybrid training setups, offering video conferencing with add-ons like AI-enabled noise-cancelling microphones, Zoom-integrated cameras, and wireless connectivity—all from a single plug-and-play device.

R&D, AI-Integration, and the Road Ahead

Backed by focused R&D, the next generation of "titanview" is currently in development. This includes an AI/ML-powered digital humanoid system capable of delivering 2D/3D rich-content experiences, especially in multilingual formats, making it ideal for personalized learning and interactive corporate simulations.

With our R&D strategic focus on **in-house content development**, in partnership with leading academic institutions, further strengthens our moat and enhances IP ownership and margin potential.

Market Landscape and Strategic Positioning

- The global interactive display market is growing at 7.5–10.4% CAGR, with India expected to lead in adoption through public and private sector digitization.
- Panel price correction (20% drop from 2019–24) has increased affordability, especially for 75″–86″ high-resolution displays.
- Titan Intech is already leveraging this trend through OEM/ODM strategies, aligning with the “Make in India” initiative.
- Our 3D-ready Mini LED and Mini LED-backlight variants will further enhance our competitive edge in the months to come.

Strategic growth

As an investor-focused company, Titan Intech remains committed to:

- Strengthening top line via institutional sales and bulk government tenders.
- Increasing operational efficiency through vertical integration of hardware, firmware, and content.
- Expanding service networks and post-sales support to enhance recurring revenue.
- Innovating continuously with AI/ML capabilities and immersive learning tools to stay ahead of global benchmarks.

"Titan Intech Limited leverages innovation, cost-effectiveness, and inclusive digital access to drive meaningful value for Stakeholders across the rapidly expanding edu-tech and enterprise digitization landscape."

Your continued trust and support are our greatest strength. Together, we are redefining the future of interactive technologies—from classrooms to boardrooms.

Warm regards,
Sunil Ghanathe
Whole-time Director
